SUMMARY

Full-stack-oriented Software Engineer building SaaS products and API-driven web applications with React, Next.js, TypeScript, Node.js and Python. Experienced in frontend architecture, performance and security improvements, AWS Cognito authentication, analytics integrations, tax planning workflows and mentoring junior developers.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Redux, Zustand, MobX

Backend & databases: Node.js, Django, REST APIs, MySQL, PostgreSQL, MongoDB

Engineering tools & practices: Git, Jest, CI/CD, Docker, SonarQube, Sentry, Mixpanel, WebSockets, REST APIs

PROFESSIONAL EXPERIENCE

Software Engineer | TaxMD *Jul 21, 2025 - Present*

- Designed and evolved scalable frontend architecture, reusable components and application structures to improve maintainability and consistency across TaxMD features.
- Documented reusable components, technical decisions and internal libraries to streamline onboarding and improve team efficiency.
- Mentored junior frontend engineers through code reviews, technical guidance and knowledge sharing to strengthen implementation quality and engineering practices.
- Strengthened application security and SOC 2 readiness by implementing AWS Cognito authentication, role-based access control (RBAC), secure API integrations, input validation, dependency vulnerability management, and access controls to protect sensitive taxpayer data.
- Owned end-to-end frontend development and maintenance of TaxMD.com with Next.js, including product content, contact workflows and tailored pricing for B2B and B2C customers.
- Optimized TaxMD.com's Next.js performance through Lighthouse-guided improvements; reported a performance score increase from 70 to 92 (+22 points).
- Built TaxMD Personal features including AWS Cognito sign-in and an interactive tax planning workspace for questions, tax-saving strategies and dashboard insights.
- Developed shared-workspace collaboration, taxpayer profiles, entity structuring and US tax-form views, integrating APIs to manage and display tax-related data.
- Collaborated with the AI team to integrate OCR technology into TaxMD Personal, automating data capture and pre-populating form fields to streamline user workflows.
- Integrated Google Tag Manager to track website events and pass marketing data to HubSpot for engagement and conversion insights.

Software Engineer | Zegal *Apr 2024 - Jul 2025*

- Developed platform modules for legal-document workflows and modernized legacy code to improve maintainability and stability.
- Conducted code reviews and mentored junior engineers through pair programming, technical guidance and knowledge sharing to improve code quality and development practices.
- Integrated Stripe subscriptions to support digital payments and customer subscription workflows.
- Implemented frontend security controls including role-based access control (RBAC), Content Security Policy (CSP), and dependency vulnerability management, supporting ISO/IEC 27001-aligned security practices.
- Built conversational AI interfaces using WebSockets and REST APIs, including streaming responses and dynamic form experiences.

- Reduced component rendering time from 550 ms to 300 ms (45% reduction) through React memoization and virtualization; also improved FCP and LCP.
- Reduced CI/CD build time from 10 to 7 minutes (30% reduction) and Docker image size from 960 MB to 240 MB (75% reduction) using Docker multi-stage builds and image optimization.

Software Engineer | EKbana Solutions *Jun 2020 - Apr 2024*

- Designed and optimized React/Next.js interfaces for fintech, insurance and blockchain products, improving usability and frontend loading performance.
- Integrated eSewa, Khalti and Fonepay payment gateways into Nepali wallet and payment workflows, supporting secure digital transactions.
- Implemented Ethereum and MetaMask integrations for blockchain applications, enabling wallet connectivity and cryptocurrency-based experiences.
- Upgraded legacy React/Next.js dependencies and strengthened frontend security to improve compatibility, stability and data protection.
- Implemented a monorepo using Lerna and Yarn Workspaces for shared dependency management; contributed to breaking a monolithic application into independently deployable microservices.
- Used SonarQube in CI/CD pipelines to monitor code quality and identify potential security and performance issues.
- Integrated Mixpanel event tracking, user segmentation and funnel analytics; reported a 30% improvement in feature adoption.
- Configured Sentry error monitoring for staging and production with custom alert rules; maintained Jest unit and integration tests.

PROJECTS

TaxMD *Jul 2025 - Present*

- Owned the public website's frontend delivery, including B2B/B2C pricing and GTM–HubSpot analytics; also delivered tax-planning, collaboration and taxpayer workflows for TaxMD Personal.

Legal document SaaS | Zegal *Apr 2024 - Jul 2025*

- Developed legal-document creation and management workflows, including subscriptions and AI-powered interface features.

Payment platform | CityPay *Aug 2023 - Apr 2024*

- Contributed to a Nepali digital-payment platform supporting payments for multiple services.

Political party website | Rastriya Swatantra Party (RSP) *May 2023 - Oct 2023*

- Worked on the RSP public website, delivering frontend interfaces that present party information to visitors.

Insurance web application | Himalayan Everest Insurance (HEI) *Apr 2022 - Mar 2023*

- Developed web interfaces for customers to access insurance-related services online.

NFT bidding platform | Avalon *Oct 2021 - Mar 2022*

- Contributed to a blockchain platform supporting cryptocurrency-based bidding for NFTs.

EDUCATION

Bachelor in Computer Engineering | Advance College of Engineering and Management | 2017 - 2021

CERTIFICATIONS

Meta Front-End Developer Certificate | Harvard CS50

ADDITIONAL

Languages: English, Nepali | Interests: Full-stack engineering, AI, blockchain
